

AQUARINSE™ Multi-Media Backwashing Filter

For consumers who demand the very best!

**Enjoy the many benefits an
AQUARINSE™ Multi-Media Backwashing Filter Provides**

- Innovative 5-Stage Design for total all-in-one whole house water treatment.
- No need for the expense of several tanks.
- Dramatically reduce backwash requirements.
- Multi-stage design maximizes media life and effectiveness.
- Removes sediment and other fine particulates.
- Eliminates chlorine, tastes, and odors.

ENGINEERED WATER TREATMENT SOLUTIONS

AQUARINSE™ Multi-Media Backwashing Filter

For consumers who demand the very best!

Metered valve for greater efficiency

Our control valve is metered for greater efficiency and reduced backwash requirements because regeneration is based on water consumption. Digital LCD display provides information on usage and gallons remaining before the next regeneration cycle.

Pre-Filter

Special prefiltration media removes small particles five-microns and up, thereby providing increased removal of particulate matter with far less backwashing.

Activated Carbon

Activated carbon is used to remove chlorine, the disinfection by-products of chlorine, tastes and odors and to extend the life of the post-oxidation media.

High Efficiency Post Oxidation Media

Special fine mesh media is used for post-oxidation treatment to remove remaining particulates and any unoxidized contaminants.

Features & Benefits

- Designed for whole house water treatment with minimum pressure drop.
- Far lower backwash requirements means less water storage and shorter recovery times for low producing wells.
- Highly effective particulate removal down to five microns means clear water and clean laundry.
- Large carbon bed effectively removes chlorine, tastes and odors!
